

Dear Governor Malloy,

I strongly oppose the use of fracking or refinement centers in any part of Connecticut. Fracking environmentally unsafe and structurally unsound. the use of our precious resources such as water too refine radioactive materials and toxic and poisonous chemicals to make them safe is absolutely absurd. The radioactive material which is left after the refinement process has a 1200 year half life. I love my Connecticut, I love my environment. I do not love the use of natural resources to Syracuse Sicily try to remove toxic materials which are in multiple phases --liquid, solid, and gaseous. These toxic materials can be transported to the water through the air and leach into our water systems and into our earth which as I said before have a 1200 year half life. There is no such thing as Safe fracking as there is at least a 20 percent failure rate in the concrete columns where the toxic materials can leak into the waters, the lands, and be transported air bound.

don't let the greed of the oil and gas companies Pollut and suffocate our future. The new oil will be water. The oil and gas companies have seen to this. Halliburton is a great example of corporate greed and corruption all for profits.

Connecticut is not for sale on any level for transportation of fracking materials, refinement of fracking materials, and the use of natural resources to try unsuccessfully to neutralize the fracking materials.

I will never ever agree to the use of fracking in our state or in any of the states which is present. there are too high a consequence to jeopardize the most precious resource in the world. No more fracking. At all!

Sincerely,  
Ms . Athena Coroneos
